

## CLAIMS

<sup>1</sup> What I claim as being new and desired to be protected by Letters Patent is:

1. A hand breadring apparatus for use in association of coating food with foodstuff where foodstuff has been deposited on the outer surface of the food, the apparatus comprising:
  - a convex shaped plate having any size or shape configuration;
  - a plurality of convex shaped protrusions attached to the outer surface of said convex shaped plate acting as press points having any size or shape configuration;
  - an optional plurality of prongs attached to said convex shaped protrusions aiding in the embedment of foodstuff onto the outer surface of food having any size or shape;
  - an attachment such as, but not limited to, a foodstuff container, acting as a handle, having any size or shape configuration, to said convex shaped plate that provides leverage and maneuverability of said convex shaped plate.
2. An attachment such as, but not limited to, a foodstuff container lid lip, attached to said foodstuff container brim, as set forth in claim 1, such that said foodstuff container can also act as a lid for a separate foodstuff container
3. A foodstuff container lid having a foodstuff spout and a foodstuff container lid lip as a separate attachment to said apparatus as set forth in claim 1.
4. An apparatus according to claim 1 constructed using compositions of matter, not known to contaminate food products and is rigid to withstand a moderate amount of downward hand pressure, such as, but not limited to metals, plastics, wood, or paper products.
5. An apparatus according to claim 2 constructed using compositions of matter, not known to contaminate food products and is rigid to withstand a moderate amount of downward hand pressure, such as, but not limited to metals, plastics, wood, or paper products.
6. An apparatus according to claim 3 constructed using compositions of matter, not known to contaminate food products and is rigid to withstand a moderate amount of downward hand pressure, such as, but not limited to metals, plastics, wood, or paper products.
